

# Mentor class 02 - CSS

## Your task

- You will get starter files and you will have to write all the code in those ones. Do not remove anything from them that's already there, otherwise, some of the css rules might not work.
- The design that you will have to make is shown on the screenshot that is also sent as well as the video (check the hover effects on it).
- All the colors and fonts are sent in the specs.txt file, check it out.
- The social icons should be links that lead to nowhere, put # inside href.
- Use Fontawesome for the icons (it's already linked in the head on the starter file):

The A - icons is called autoprefixer (when you search for it)

The social icons are facebook, instagram and twitter

## Notes

1. Each group needs to come up with 1 file named \*mentor-class-group-\*number\*\* for. example: mentor-class-group-1.
2. Send the file to the mentor in a private message on slack.

\*\* Please use google chrome as a browser for the fonts to work.

## Good luck
