

# Mentor class 03 - CSS

## Your task

- You will get starter files and you will have to write all the code in those ones. Do not remove anything from them that's already there. (if that wasn't obvious until now)
- The design that you will have to make is shown on the screenshot that is also sent.
- All the colors are sent in the colors.txt file, check it out.
- The first 100vh of the page should be filled with the image banner (hint background-image) and the text over it should be positioned in the center vertically and horizontally (hint: position).
- Be sure to make all the sections below the banner end at 90% of the page and make them centered.
- The 3 blog-posts & the 3 products should be links (tags).
- If it wasn't obvious the texts below the border on the blog-posts are part of the entire blog-post, so put the text inside the tag.
- The bottom red message is shown all the time at the bottom of the screen when you scroll through the page. (hint: position).

\*Note: all the section spacings between the sections should be equal. (like shown)

## Notes

1. Each group needs to come up with 1 file named  
\*mentor-class-group-\*number\*\* for. example: mentor-class-group-1.
2. Send the file to the mentor in a private message on slack.

**Good luck**
