

Mentor Class 02 - Bootstrap

This challenge should contain an index.html, css folder with a style.css file, and img folder with all the images. (all of them are inside the starter folder).

For the icons you can use Font Awesome icons, the script is already linked in the index.html.

You should make the page without using css, but with the bootstrap classes that we learn till now. (only for the icons in the footer, there is a class in css that you should use for their sizes).

Your task will be to divide the work between the members of your group and work on those sections separately at the same time (each section it's a separate task/branch).

1. Place the challenge in a GitLab project named ****mentor-classes-group-number**** (example: mentor-classes-group-1, that you already created).
- Each challenge every week will be in a separate branch (DO NOT WORK ON MASTER).

Suggestion

Agreeing on a specific naming style for your branches can make working with git much easier as you go deeper in your project.

The catch!

All of you will have to work on the same index.html and style.css files.

Be careful as conflicts will appear when multiple developers work on a single file. It happens in development all the time and you have to learn how to handle resolving conflicts.

Good luck!
