

Mentor class 01 - HTML

Your task

- You will get a starter html file and you will have to write all the code in that one. Do not remove anything from it that's already there, otherwise, the tables won't work.
- The design that you will have to make is shown on the screenshot that is also sent.
- Make sure you use the attributes we've learned to get the wanted design.
- Make sure all of the letters are made with tables. Each letter is in a separate table.
- To color the columns, use **bbgcolor** attribute the same way you used the other attributes on the table before, except this one has to be on the column itself. In the design, the color used is: `bbgcolor="rebeccapurple"`.

Notes

1. Each group needs to come up with 1 file named
*mentor-class-group-*number** for. example: mentor-class-group-1.
2. Send the file to the mentor in a private message on slack.

Good luck
