PHP Forms

1. You will have to create a register form like in the screenshot. The form will have the following fields: First Name, Last Name, Email, Birthday month (full name), day and a Gender. **All fields are required.**

   The validation rules are:

   1. First and Last Name can not be empty
   2. Email field must accept only email (validate with **filter_var()**)
   3. If you choose 31 of February or any other non existing date, an error will appear: "There are only 28 days in February.". (You can hardcode February to have 28 days)
   4. If user is younger than 18 years, an error will appear: "You must be over 18 to join us".

   If there are no errors, and all data is validated, a text in green letters will appear at the top of the form with text: "Successfully registered!".

2   You will have to create from with single input form with the following format: 2 + 3

Allowed operations are: +, -, *, /. If the form is submitted with invalid numbers or operation error message will be printed otherwise the result will be printed above the form. Also there should be empty space between numbers and operation sign.

Enter the numbers and operation: [Ex: 2 + 3   ] * Please enter valid numbers and one of the operations: +, -, *, /
[Calculate]

Result is: 1
Enter the numbers and operation: [Ex: 2 + 3   ] *
[Calculate]
