Mentor class 04 - CSS

Your task

- You will get starter files and you will have to write all the code in those ones. Do not remove anything from them that's already there. (if that wasn't obvious until now)
- The design that you will have to make is shown on the screenshots and the video that are attached.
- All the colors and images are sent in the specs.txt file, check it out.
- The navbar should stay fixed on the left side of the page and have a 20% width of the page.
- The rest of the page is scrolling along by default.
- The last section is made out of two columns. Make sure you don't make these tables - they are not tables. (use regular div tags and style them that way).
- The design should be responsive for tablets (max-width:768px) and mobile devices (max-width: 425px, 375px, 320px) - see the screenshots for the details.

Notes

1. Each group needs to come up with 1 file named
   *mentor-class-group-*number** for. example: mentor-class-group-1.
2. Send the file to the mentor in a private message on slack.
3. For all the grids you must use flexbox (do not use floats).
4. All the spacings between the sections should be equal. (like shown)

Good luck
