Mentor class 01 - Git

Your task

Your task will be to divide the work between the members of your group and work on those sections separately at the same time (each section is a separate task). One of you will create a repo on Gitlab named by your group (example: mentor-class-group-1), invite all the members from your group, and also invite your Mentor as maintainer. When you are done with combining all the sections like you normally do, upload the mentor-class-solution to this GitLab repo.

- The menu is not fixed when you scroll through the page. Also, the hamburger icon that appears on tablet/mobile devices should just be there doing nothing. Also, hide the menu-list on those devices you show the hamburger icon.
- The first section is 100vh (including the menu, which is absolute over the banner) and has a dark-overlay (background-color) over it. Make sure that you don't darken the text inside, only the background-image.
- Tablets and mobile have the same design.
- The arrow in the bottom right corner is fixed on the page and it shows on laptop devices only.

Notes
1. Each repo should contain the starter folder that is being sent (along with all the images in it). You have screenshots as well, so see the design from there. Use the colors that are sent.
2. For the icons, you can use Font Awesome icons.

Good luck
